**Compendium of Outcome Instruments For Assessment and Research of Spinal Disorders** Gunnar Andersson, William W. Deardorff, Ephrem Fernandez, Robert Gatchel, Leonard N. Matheson, Donna D. Ohnmeiss, Peter B. Polatin, Richard C. Robinson, John J. Triano

Robert Gatchel, PhD, Contributing Editor, and a panel of MD authors have created this premiere compendium of outcomes assessment every researcher will find valuable. This indispensable resource contains valuable information not compiled elsewhere, including:

- More than 100 peer reviewed critiques of various outcome assessment instruments by multispecialty researchers.
- A wide range of paper-based questionnaires, as well as physical instrumentation-based outcome assessment instruments, are critiqued.
- Valuable contact and reference information is included for each outcome assessment instrument critiqued.
- An appendix including sample copies of the majority of instruments critiqued, such as the SF-36, MBHI, McGill Pain Questionnaire, DSM IV, Cal-FCP.
- Visual examples and measurement specifications included for each of the physical instrumentation-based outcome assessment instruments.

Nearly 100 instruments are reviewed for strengths/weaknesses, reliability/reproducibility and application. Each review is supported by a list of publications and the source of the instrument.
