Risk Analysis and Management: Engineering Resilience

Ivo Häring

Risk Analysis and Management: Engineering Resilience Ivo Häring

The book introduces basic risk concepts and then goes on to discuss risk management and analysis processes and steps. The main emphasis is on methods that fulfill the requirements of one or several risk management steps. The focus is on risk analysis methods including statistical-empirical analyses, probabilistic and parametrized models, engineering approaches and simulative methods, e.g. for fragment and blast propagation or hazard density computation.

Risk management is essential for improving all resilience management steps: preparation, prevention, protection, response and recovery. The methods investigate types of event and scenario, as well as frequency, exposure, avoidance, hazard propagation, damage and risks of events. Further methods are presented for context assessment, risk visualization, communication, comparison and assessment as well as selecting mitigation measures.

The processes and methods are demonstrated using detailed results and overviews of security research projects, in particular in the applications domains transport, aviation, airport security, explosive threats and urban security and safety. Topics include: sufficient control of emerging and novel hazards and risks, occupational safety, identification of minimum (functional) safety requirements, engineering methods for countering malevolent or terrorist events, security research challenges, interdisciplinary approaches to risk control and management, risk-based change and improvement management, and support of rational decision-making.

The book addresses advanced bachelor students, master and doctoral students as well as scientists, researchers and developers in academia, industry, small and medium enterprises working in the emerging field of security and safety engineering.

From reader reviews:

Eric Totten:

Within other case, little individuals like to read book Risk Analysis and Management: Engineering Resilience. You can choose the best book if you want reading a book. Providing we know about how is important some sort of book Risk Analysis and Management: Engineering Resilience. You can add information and of course you can around the world by the book. Absolutely right, due to the fact from book you can know everything! From your country right up until foreign or abroad you can be known. About simple matter until wonderful thing you can know that. In this era, you can open a book or searching by internet product. It is called e-book. You may use it when you feel weary to go to the library. Let's learn.

Cara Fultz:

Book is to be different for every grade. Book for children until adult are different content. We all know that that book is very important for people. The book Risk Analysis and Management: Engineering Resilience has been making you to know about other know-how and of course you can take more information. It is very advantages for you. The reserve Risk Analysis and Management: Engineering Resilience is not only giving you considerably more new information but also to be your friend when you really feel bored. You can spend your current spend time to read your guide. Try to make relationship using the book Risk Analysis and Management: Engineering Resilience. You never sense lose out for everything should you read some books.

Marvis Byrnes:

In this 21st one hundred year, people become competitive in every way. By being competitive right now, people have do something to make these individuals survives, being in the middle of the particular crowded place and notice simply by surrounding. One thing that occasionally many people have underestimated the idea for a while is reading. That's why, by reading a e-book your ability to survive raise then having chance to stand than other is high. For you personally who want to start reading some sort of book, we give you that Risk Analysis and Management: Engineering Resilience book as beginner and daily reading publication. Why, because this book is usually more than just a book.

Jeannine Lawson:

As a university student exactly feel bored to help reading. If their teacher inquired them to go to the library as well as to make summary for some guide, they are complained. Just tiny students that has reading's heart and soul or real their interest. They just do what the professor want, like asked to the library. They go to generally there but nothing reading significantly. Any students feel that examining is not important, boring along with can't see colorful photos on there. Yeah, it is to get complicated. Book is very important for you. As we know that on this era, many ways to get whatever you want. Likewise word says, many ways to reach Chinese's country. Therefore , this Risk Analysis and Management: Engineering Resilience can make you really feel more interested to read.
